Expert Believes Mighty Quake Could Explain Moses' Exodus

BY CHRIS ELIOU

ATHENS, Greece, Aug. 21 (AP)—A world authority on earthquakes believes he has evidence of an ancient upheaval that could explain how Moses and his people crossed the Red Sea—and perhaps also solve the riddle of fabled Atlantis.

After years of poring through dusty records, Prof. Angelos Galanopoulos claims he has proof that nearly 3,500 years ago the Mediterranean area was struck by the mightiest volcanic blast the world has ever known.

Galanopoulos said the upheaval with air waves some 300 times more powerful than those of a hydrogen bomb, occurred shortly before 1491 B.C. when Bible scholars say the Israelites fled Egypt.

THE PROFESSOR, who heads the Seismological Institute of Athens Observatory, told an interviewer the blast devastated the island of Thera, 500 miles off the coast of Egypt, and scattered searing volcanic ash for hundreds of miles.

The fiery deluge, he said, could explain the Old Testament's description of the plagues that visited Egypt before the exodus, with their "rivers turning red and fire running along the ground."

"Geological and climate changes brought about would account for the plagues of locusts, lice and flies, the

WATERS PARTED — Arrow locates area on Egyptian coast where Prof. Angelos Galanopoulos of the Athens Observatory says Moses and his people escaped from the Egyptians when a huge body of water in their path parted, and closed again on pursuing forces.

plagues of hail and the plagues of darkness," he added.

Some time later, he went on, came the flight from Egypt which coincided with another catastrophe on devastated Thera, now known as Santorini.

"A roof that had been formed over the volcanic crater by falling pumice—it would have been about 600 to 900 feet thick—collapsed," Galanopoulos said. "The central part of

the island, an area of 50 square miles, thus became a gigantic cavern. This caused a colossal inrush of water drawing the sea in tidal waves away from the Egyptian coast."

GALANPOULOS noted that Moses and his people were said to have gathered on a coastal strip flanked by a lake nearly 30 miles east of Egypt's Port Said.

"Between them and the next strip of dry land was a sea-filled gap about 450 feet long," he said. "The tidal rush towards Santorini left that gap dry for Moses and his people to cross."

"But the lake water remained, and as the Bible says, there was a wall of water to their right and left."

"The time that elapsed between the dividing of the waters and the backwash that overwhelmed the Egyptian army would have been about 15 minutes," he went on. "Moses and his people, whom modern research estimates as numbering 1,500, would have needed only six minutes to cross."

And the mystery of the lost continent of Atlantis? Contrary to tradition, Galanopoulos insists it was neither a continent, nor in the Atlantic, but was an island kingdom in the Aegean Sea.

Perhaps, he said, it was Santorini, which survived the volcanic blast to become a popular tourist port of call.

According to various legends from different lands, Atlantis has been identified with almost every island from Spitsbergen to the Azores.

PLATO, THE Greek philosopher, wrote about Atlantis more than 2,000 years ago, depicting it as a vanished utopia lying beyond the pillars of Hercules—two promontories at the eastern end of the Strait of Gibraltar. Plato described Atlantis as a powerful kingdom whose armies overran the neighboring Mediterranean lands until it finally sank beneath the sea, apparently destroyed by an earthquake or volcano.

Over the centuries, the Atlantis legend has undergone many changes. One popular version placed it in the neigh-

borhood of Crete at the southern tip of the Aegean Sea.

That would be less than 60 miles south of Santorini, the

scene of Galanopoulos' report of a mighty upheaval.
