

## Environmental Hazards:

- Snakes and other wildlife may seek shelter in trees, homes and vehicles. Bats are often injured in heavy rains and winds. Do not handle them. Seek immediate treatment if bitten or injured by an animal. Beware of displaced pets.
- Return home in daylight for best visibility and to avoid using unsafe power sources.
- Standing water after floods is a breeding place for mosquitoes. Drain all standing water and empty water from outdoor items such as old tires, cans and flower pot bases. Protect yourself with an appropriate insect repellent.
- Let no one re-enter your home while flooded unless the main electrical switch has been turned off.
- Wear shoes in post-flood areas to reduce the chances of punctures or cuts from nails and other sharp objects.

# FLOOD PRECAUTIONS

Within any given week at this time of year, the weather in North Texas can range from hot and summer-like to blustery with sudden downpours. Sometimes it rains for days, bringing about the possibility of flash flooding.

Tarrant County Public Health offers these suggestions for coping:

### General:

- Do not allow children to play in or near flood water or storm drains.
- Disinfect all furniture, woodwork and other household surfaces in homes that have flooded.
- Wash hands frequently during cleanup to lessen recontamination of cleaned areas.
- Disinfect childrens' toys with a solution of one cup bleach to five gallons of water.
- To prevent producing toxic fumes, do not mix bleach with products that contain ammonia.

### Medical:

- People with puncture wounds or cuts exposed to flood water could be at risk of contracting tetanus and may need to have a tetanus shot to prevent infection.

### Water:

- Watch for news media announcements about the safety of public drinking water supplies. Follow "boil water" alerts issued by local water utilities or the Texas Commission on Environmental Quality. Do not drink water from unknown sources.
- People under boil water alerts and persons with private wells that may have been contaminated by flood water should use only bottled, boiled or treated water until water has been tested and found safe.
- If you boil water for drinking purposes, allow it to boil for at least one minute. Water also may be disinfected with chlorine or iodine (follow package directions) or with ordinary household bleach — one-eighth teaspoon (about eight drops) per gallon of water. Sterilize water containers and drinking utensils with a solution of household bleach.

### Food:

- Do not eat food that has been in contact with flood water.
- If the electricity has been off, refrigerated food may have spoiled. Discard any food that has been at room temperature for more than two hours or if it has an unusual odor or color. Thawed food from freezers may be safe for consumption or refreezing if it is still partially frozen or is "refrigerator cold."
- Babies on formula should be given ready-to-feed formula or powdered formula prepared with bottled drinking water.
- Wash hands with soap and disinfected water before eating or handling food, after cleanup work and after handling flood water-contaminated items.
